Reading age	: Baby and up

While it's important to be aware of the dangers, it's also important to remember that water safety is a skill that can be learned. By following a few simple rules, you can help reduce your risk of drowning and other water-related accidents.

Drowning

Drowning is the leading cause of death in children under the age of 5. It can also be fatal for adults, especially those who are not strong swimmers.

There are many factors that can contribute to drowning, including:

- Lack of supervision
- Impaired judgment due to alcohol or drugs
- Underestimating the depth of the water
- Swimming in unfamiliar waters
- Medical conditions, such as heart disease or seizures

If you see someone who is drowning, call 911 immediately. While you wait for help to arrive, you can try to rescue the person yourself. However, it is important to remember that drowning victims can be dangerous, so always put your own safety first.

Hypothermia

Hypothermia is a condition that occurs when the body loses heat faster than it can produce it. This can happen even in relatively warm water, if the person is exposed to cold water for a prolonged period of time.

Symptoms of hypothermia include:

- Shivering
- Confusion
- Loss of coordination
- Slurred speech
- Loss of consciousness

If you think someone is suffering from hypothermia, call 911 immediately. While you wait for help to arrive, you can try to warm the person up by

removing their wet clothes and covering them with a blanket.

Shark Attacks

Shark attacks are relatively rare, but they can be fatal. The majority of shark attacks occur in coastal waters, near beaches. Most shark attacks involve unprovoked attacks, meaning that the shark атаковал without being provoked by the human.

There are a few things you can do to reduce your risk of being attacked by a shark, including:

- Swim in groups
- Avoid swimming in areas where there have been recent shark sightings
- Don't swim at night
- Don't wear jewelry or bright clothing
- Don't swim in murky water

If you are attacked by a shark, do not panic. Try to stay calm and fight back. Hit the shark on the nose or gills, and try to gouge its eyes.

Other Water-Related Accidents

In addition to drowning, hypothermia, and shark attacks, there are a number of other water-related accidents that can be fatal. These include:

- Boating accidents
- Diving accidents

- Water skiing accidents
- Surfing accidents
- Tubing accidents

The best way to prevent these accidents is to be aware of the dangers and to take appropriate precautions. Always wear a life jacket when boating or swimming, and never dive into water that you don't know the depth of.

Water can be a dangerous environment, but it is also a place of beauty and recreation. By following a few simple rules, you can help reduce your risk of drowning and other water-related accidents.

So, next time you're planning a day at the beach or pool, remember to be safe. And, if you see someone who is in trouble, don't hesitate to call for help.
